The Business Operating Environment

Reach of the Business Mission Area

"The Secretary of Defense is responsible for a half-trillion dollar enterprise that is roughly an order of magnitude larger than any commercial corporation that has ever existed. DoD estimates that business support activities—the Defense Agencies and the business support operations within the Military Departments—comprise 53% of the DoD enterprise."

Training

Service Oriented Architecture (SOA)

Title: Service Oriented Architecture (SOA)

Prerequisite: None

Description: This course on Service Oriented Architecture (SOA) reviews the background of where IT infrastructure is in today's DoD and explains the challenge which SOA addresses. In addition you will be able to describe the five DoD BMA transformation principles. It also provides a definition of Service Oriented Architecture. The third lesson reviews what common vocabulary is, how it is determined and how primitives and design patterns enable better communication between systems designers, architects and engineers.

Audience: Department of Defense Business Transformation Stakeholders: Program Managers, System Implementers, Enterprise Architects, and Functional Staff.

Duration: ~40 minutes

Lesson 1 - Background and Challenge
Duration: 13 minutes
Learning Objective:

- Explain the Challenge which SOA addresses.
- Describe the five DoD BMA transformation principles.

Lesson 2 - Definitions
Duration: 14 minutes
Learning Objective:

- Define Service Oriented Architecture from the perspective of the DoD Business Mission Area.

Lesson 3 - Benefits of SOA
Duration: 14 minutes
Learning Objective:

- Recall the five transformation principles supported by SOA.
- Explain the significance of implementing SOA.
- Illustrate the benefits of adopting a SOA.
- Describe how a net-centric environment supports SOA.

Lesson 4 - Common Vocabulary, Primitives and Design Patterns
Duration: 14 minutes
Learning Objective:

- Identify the challenge faced by architects and engineers when developing architecture.
- Define and describe what a common vocabulary is and why it benefits architectural development.
- Define and describe primitives and explain how they aid in creating common understanding when developing architecture.
- Explain design patterns and their relationship to primitives.

How Are We Getting There?

Draft Roadmap for DoD Business Operations Transformations

Interoperability Policy Goals:

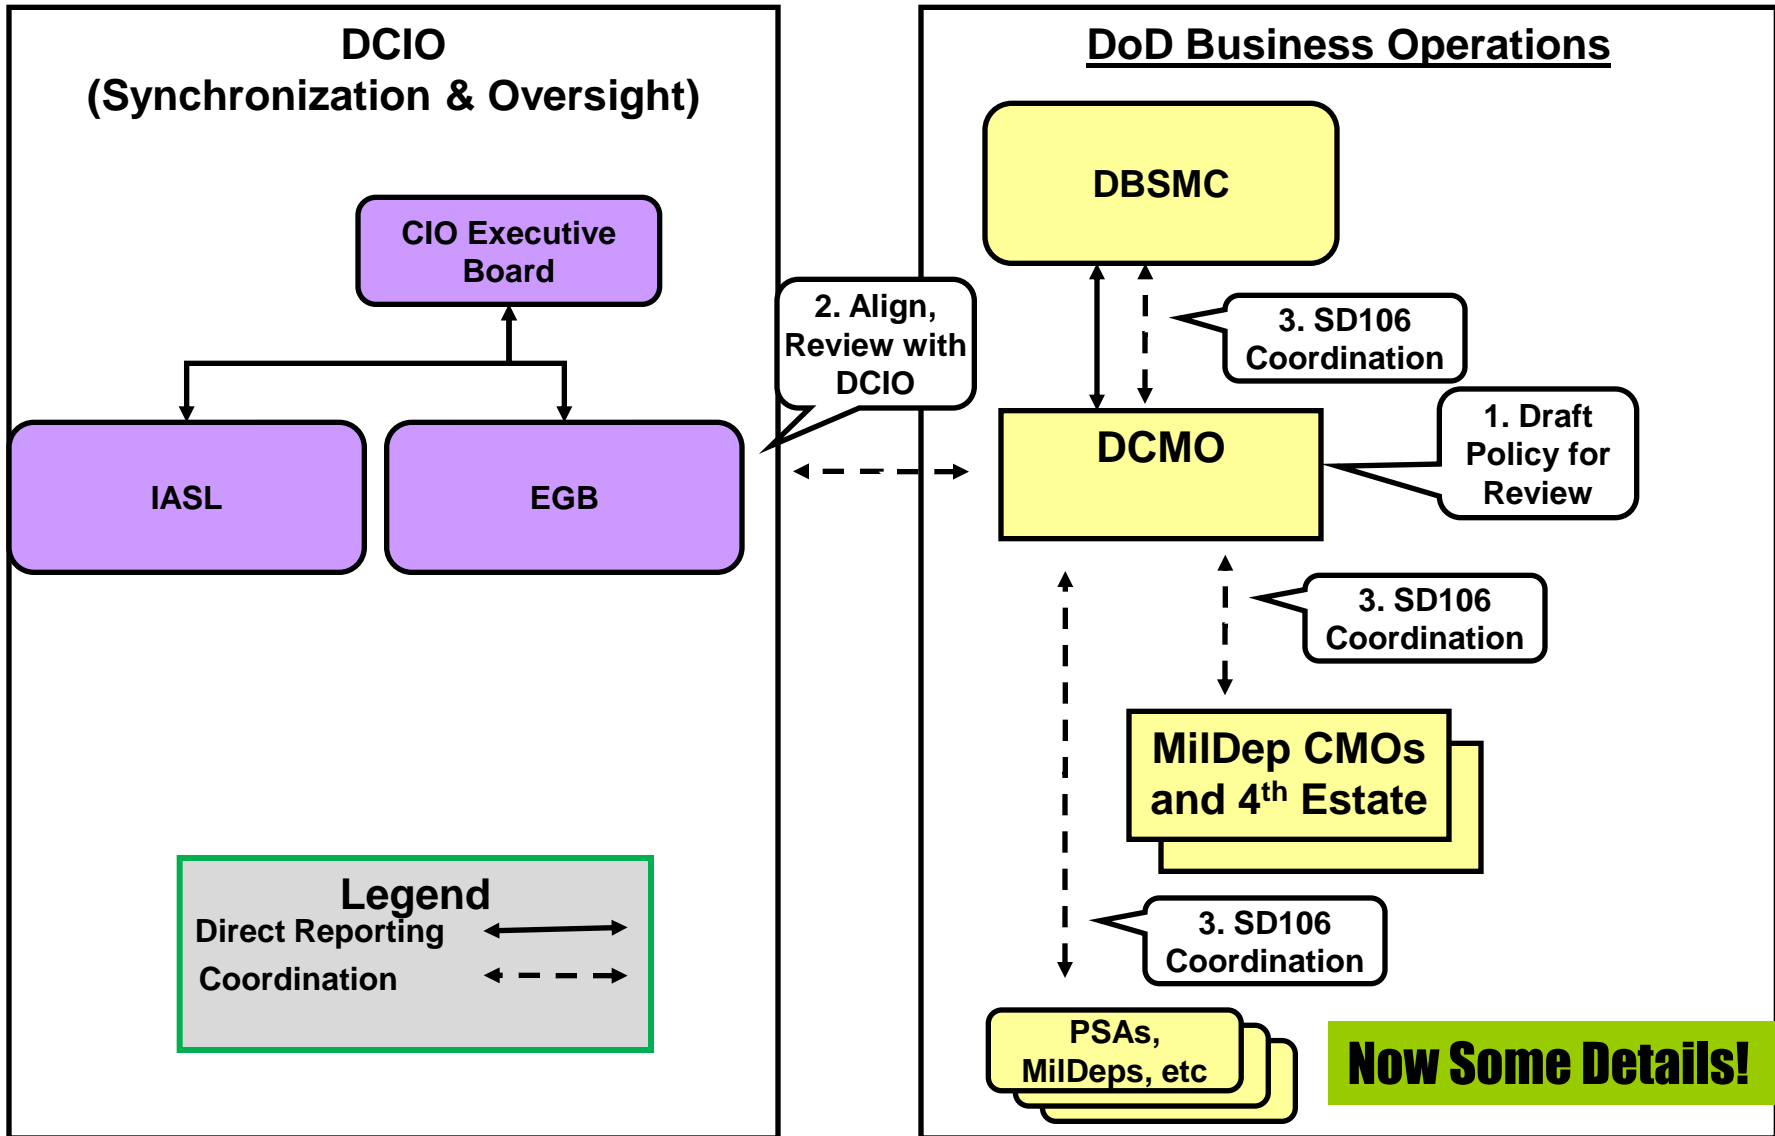

Objective: De-conflict redundant capabilities and informational silos

1. Policy to Establish functional interoperability through informational interoperability
 - Identify redundant capabilities using common vocabulary
 - Create understandable business processes using standardized representation (Primitives)
 - Create consistent and reusable vocabularies using CARP*
2. Policy to Limit the creation of new data services to only those cases when they cannot be created from existing information exchanges
3. Policy to Remove the need for custom interfaces by creating implicit interoperability
 - Make information understandable using information models
 - Create standardized and reusable methods for accessing data
 - Create physical instantiation of the common vocabulary

Joint Policy Approach

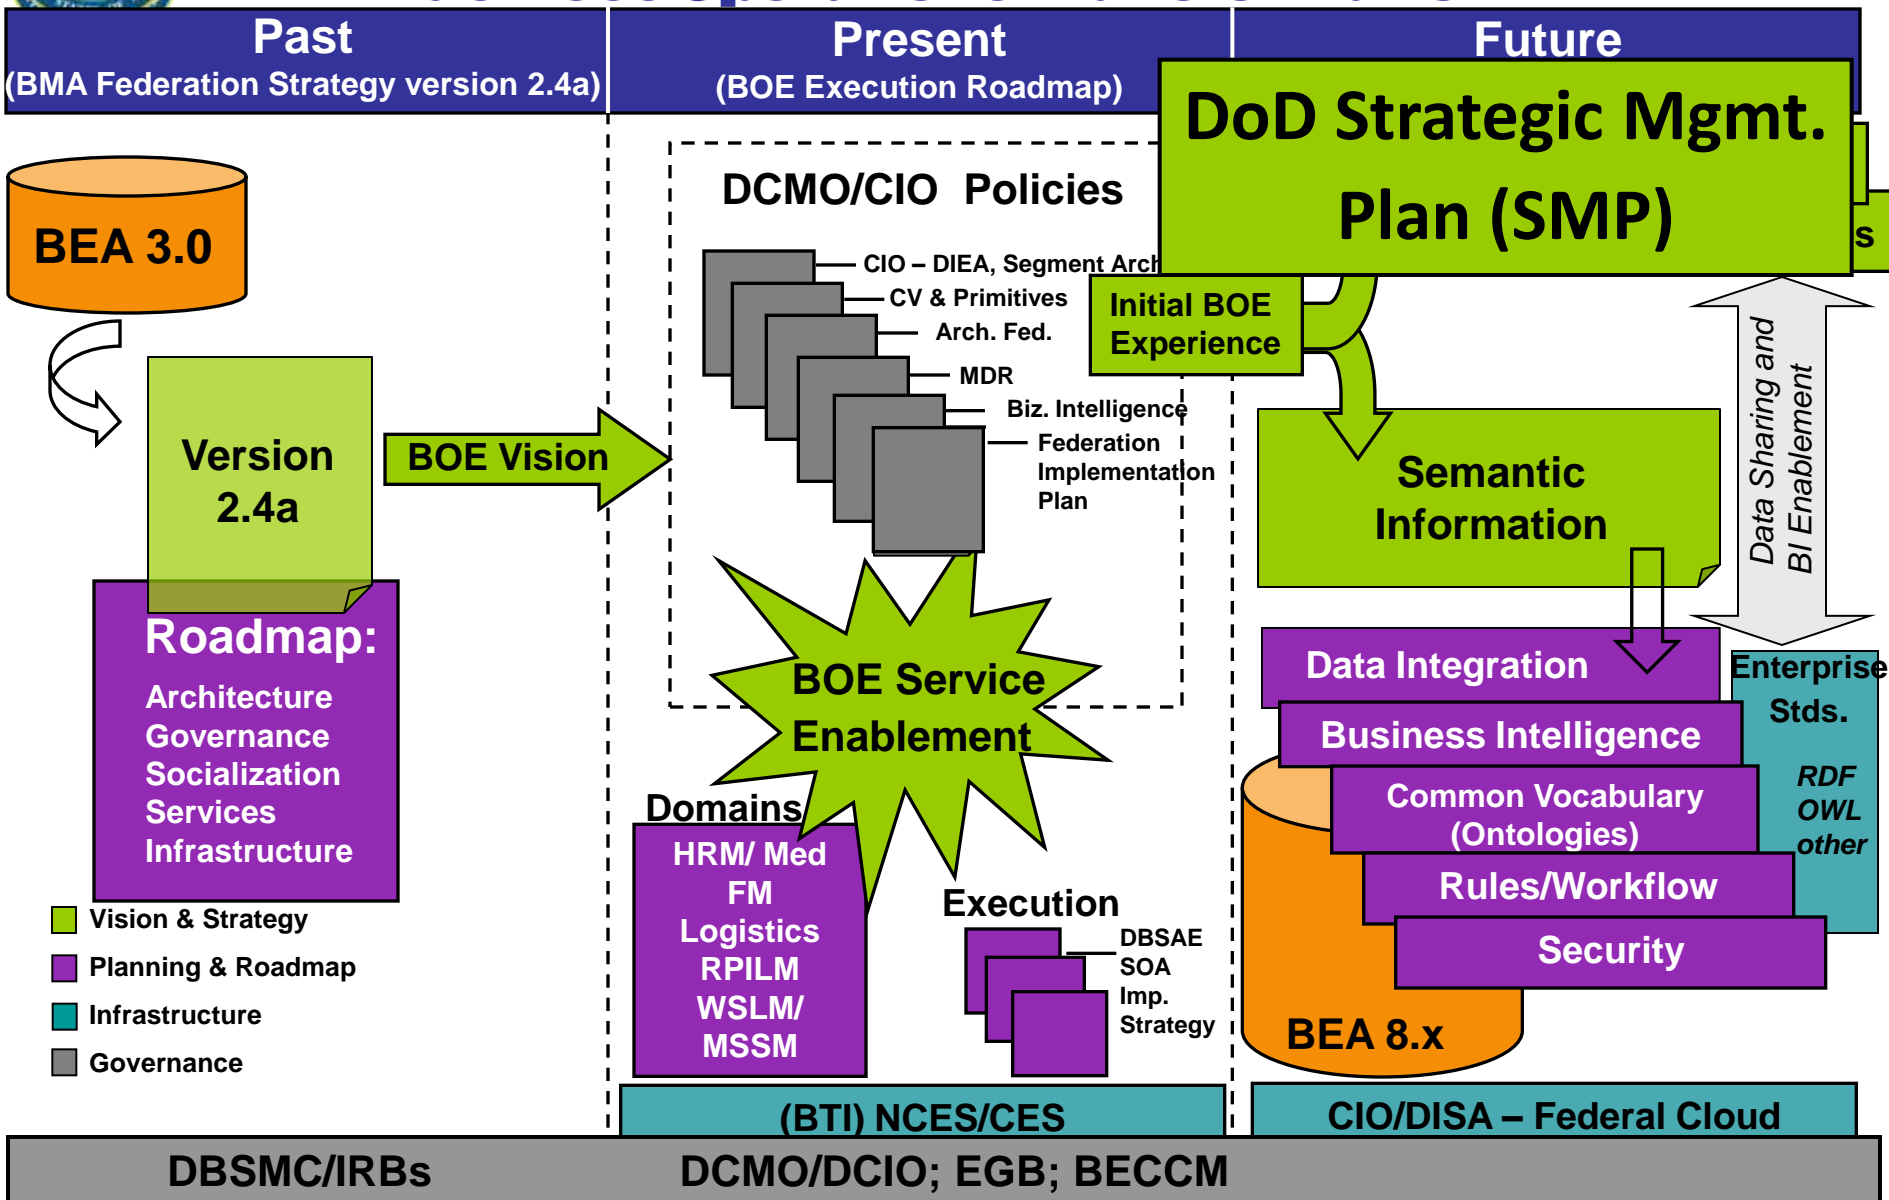

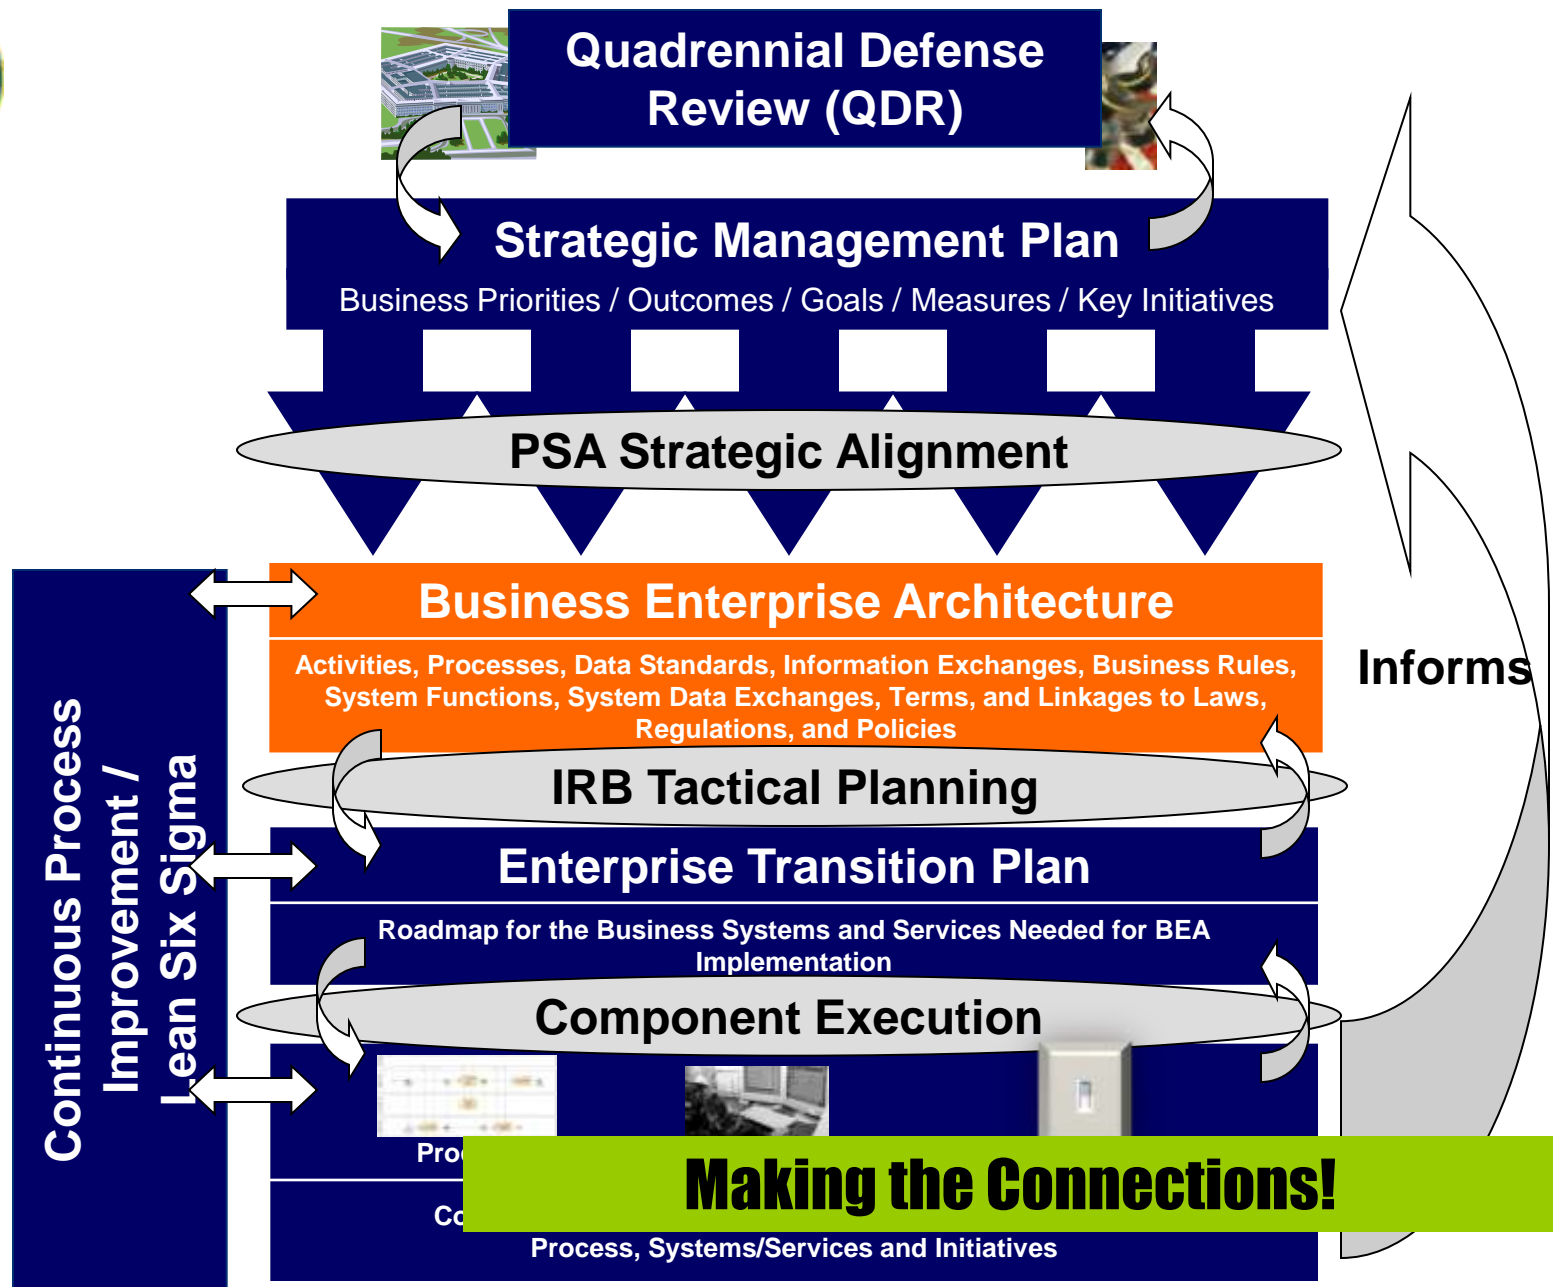

Where We Are Heading!

The BOE Vision – Version 3.0

Strategy and Roadmap for DoD Business Operations Transformation

SMP- E2E - BEA

March 16th, 2010
SMP - E2E - BEA
DRAFT Alignment
Case Study
Author - BEA Team

SMP Priority 5- Strengthen DoD Financial Management

E2E Based on the SMP 5 Outcomes and Goals:
Procure to Pay (P2P), Mapped to SMP Priority

SMP Outcome and Goals determine what E2E L0 to focus on Measures/Metrics are captured in the executed leaf process model below

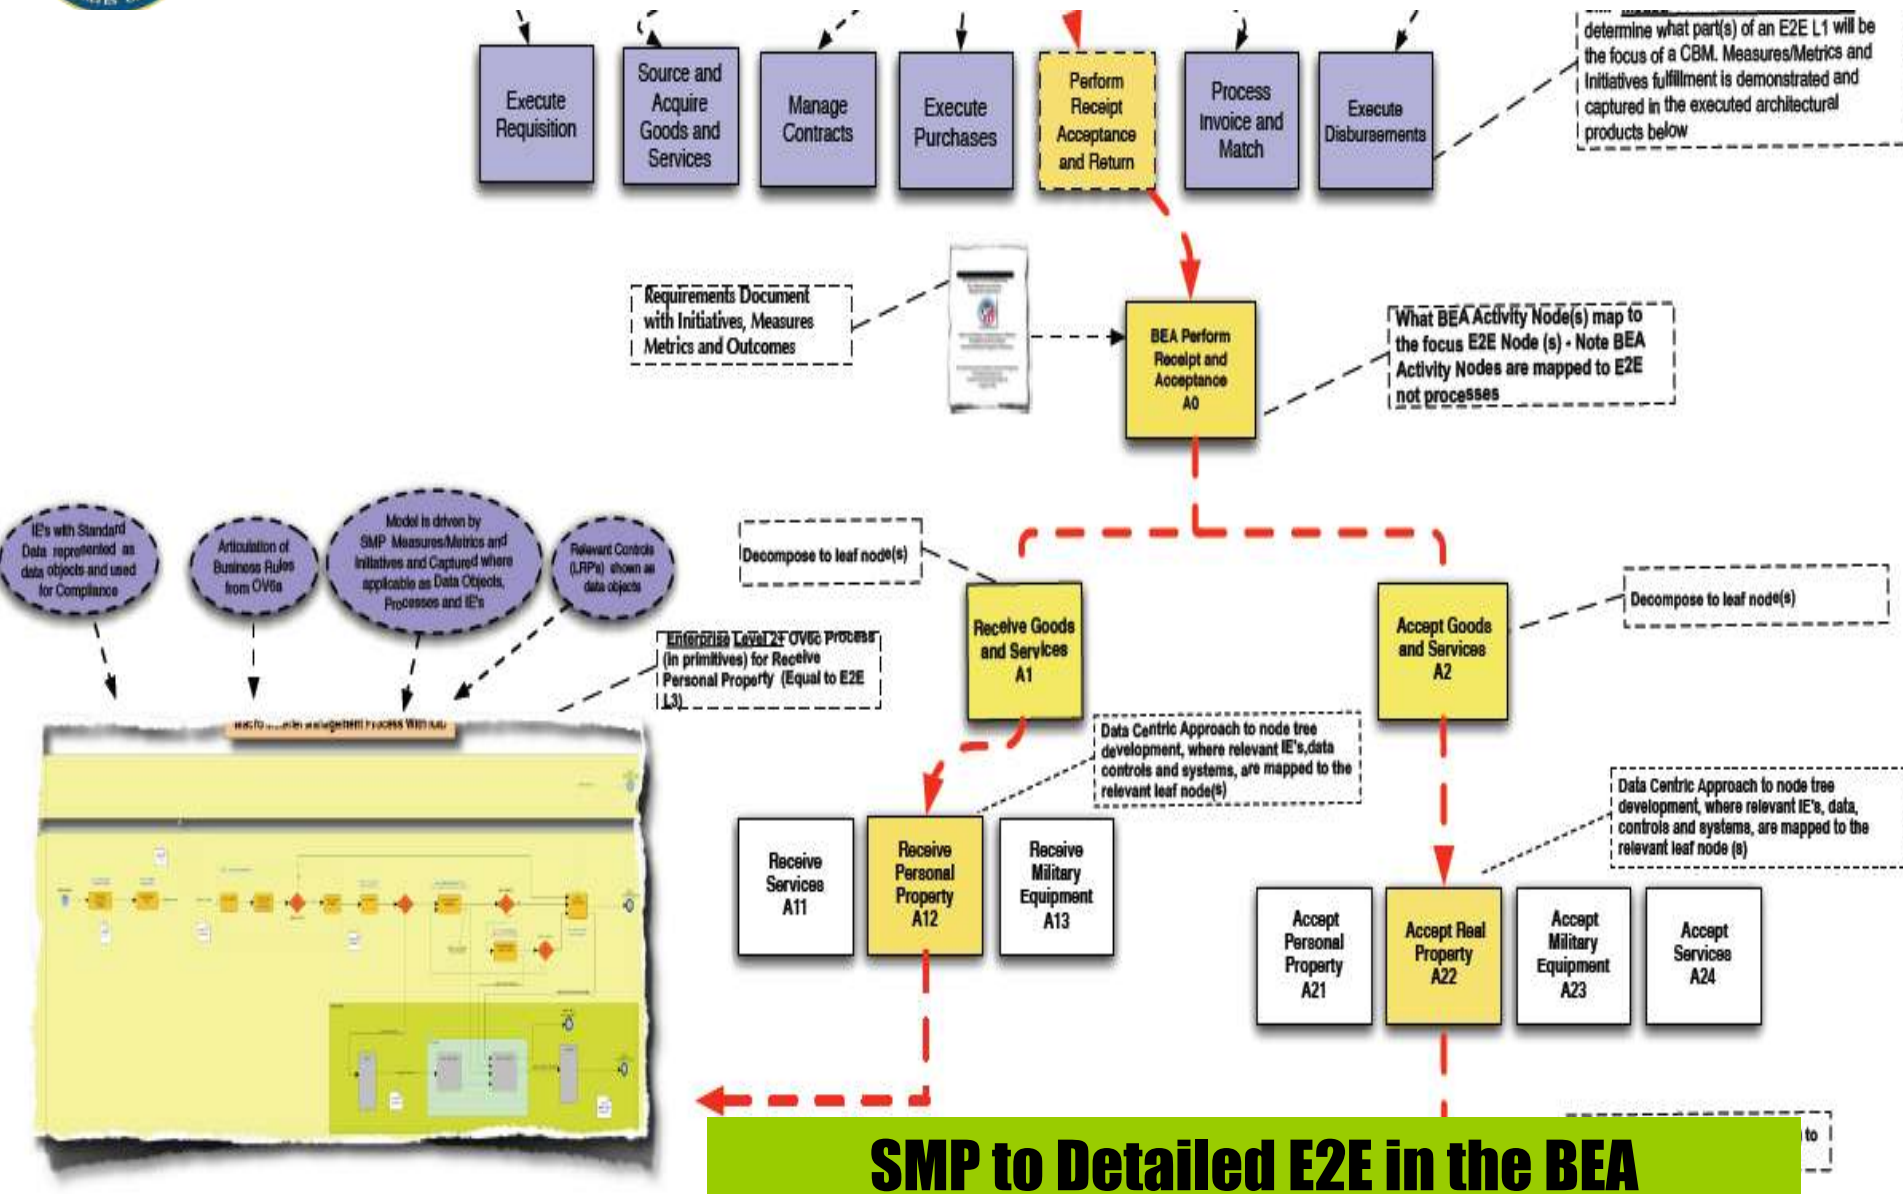

SMP Measures/Metrics and Initiatives determine what part(s) of an E2E L1 will be the focus of a CBM. Measures/Metrics and Initiatives fulfillment is demonstrated and captured in the executed architectural products below

SMP to Detailed E2E in the BEA

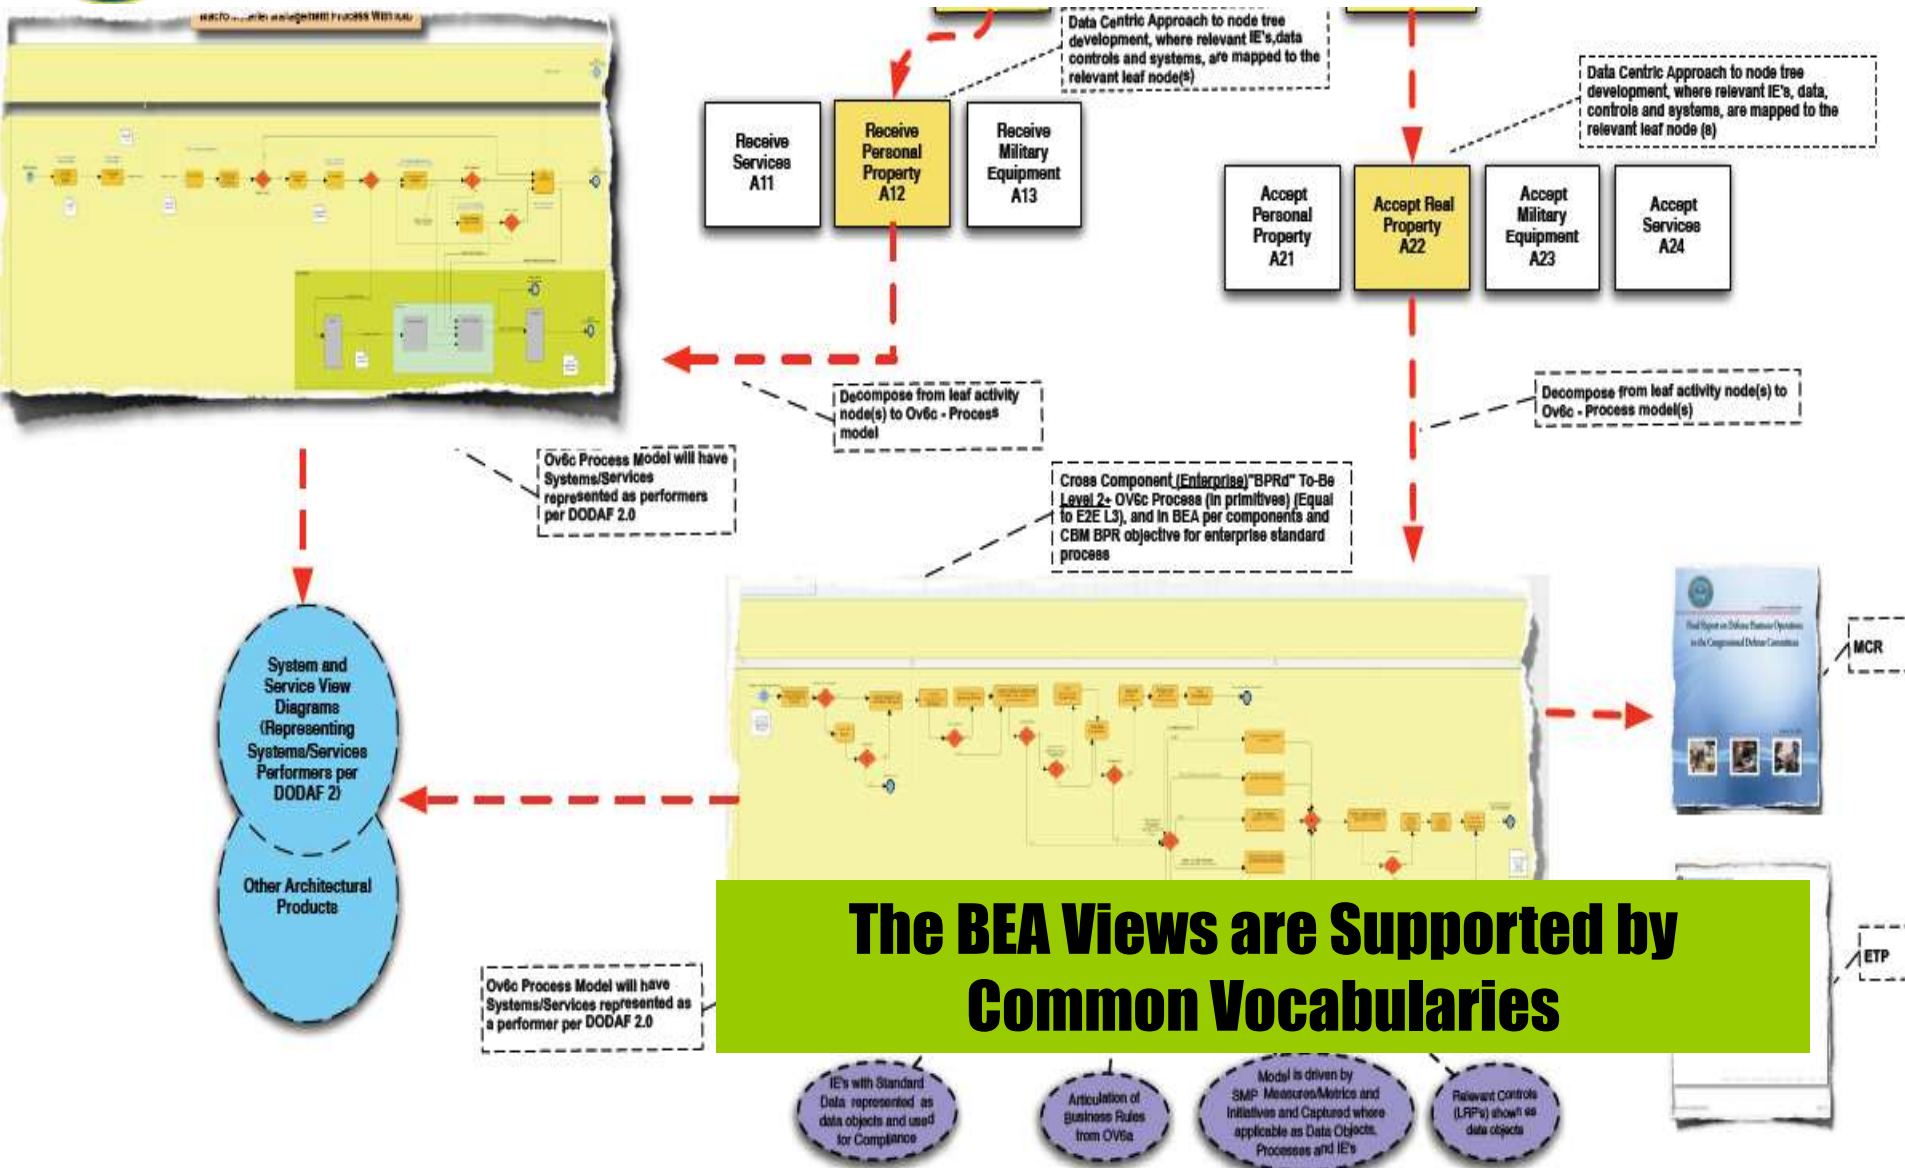

SMP- E2E - BEA

SMP- E2E - BEA

Common Vocabulary

Functional / Requirements

- Governance
- Identify Conflicts
- Resolve Conflicts
- Review Vocabulary
- Approve Vocabulary

- Architecture
- C.A.R.P. / AV-2 Template
- Match Terms
- Build Models / Primitives
- Validate Models

Building the Vocabulary

Using the Vocabulary

- Alignment
- Unify Format
- Parse Input
- Cleanse Vocabulary
- Match Terms
- Publish Results

- Mediation & Virtualization
- Routing
- Content-based
- Messaging

CARP Ensures Common Vocabulary Use!

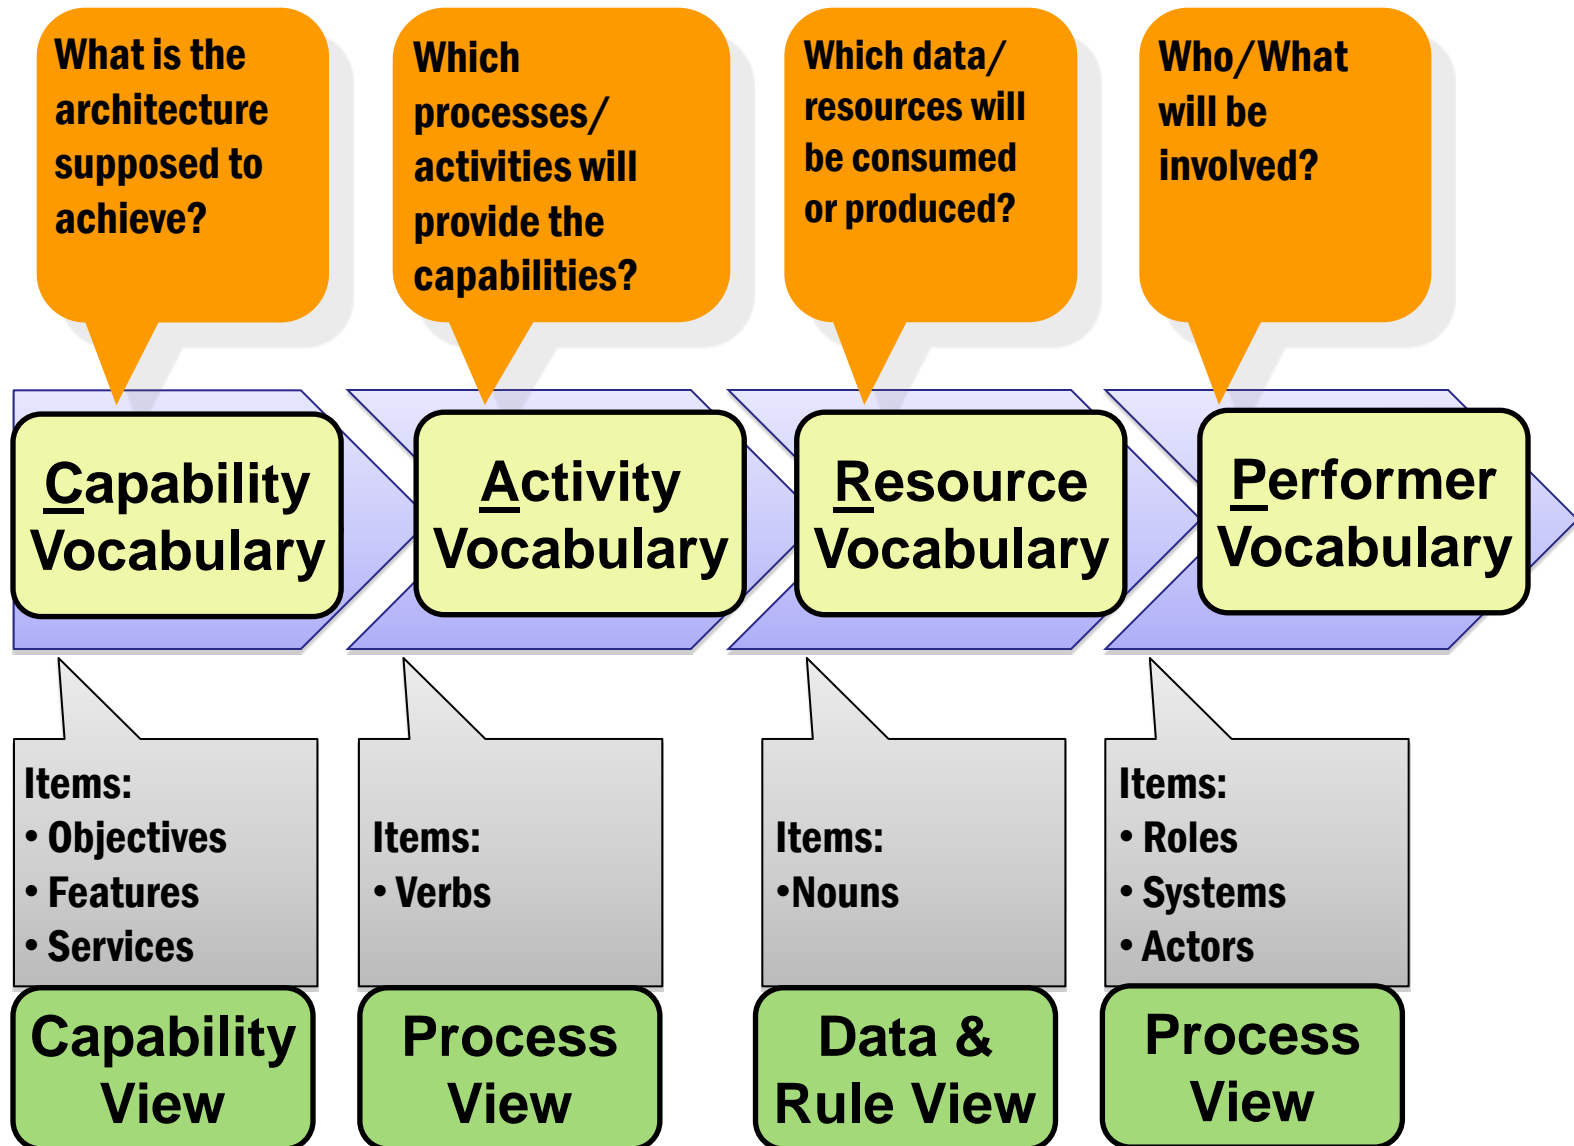

Legacy Systems

Technical / Systems

Virtualization

Building Common Vocabularies

Business Enterprise Architecture (BEA)

Governance is Key

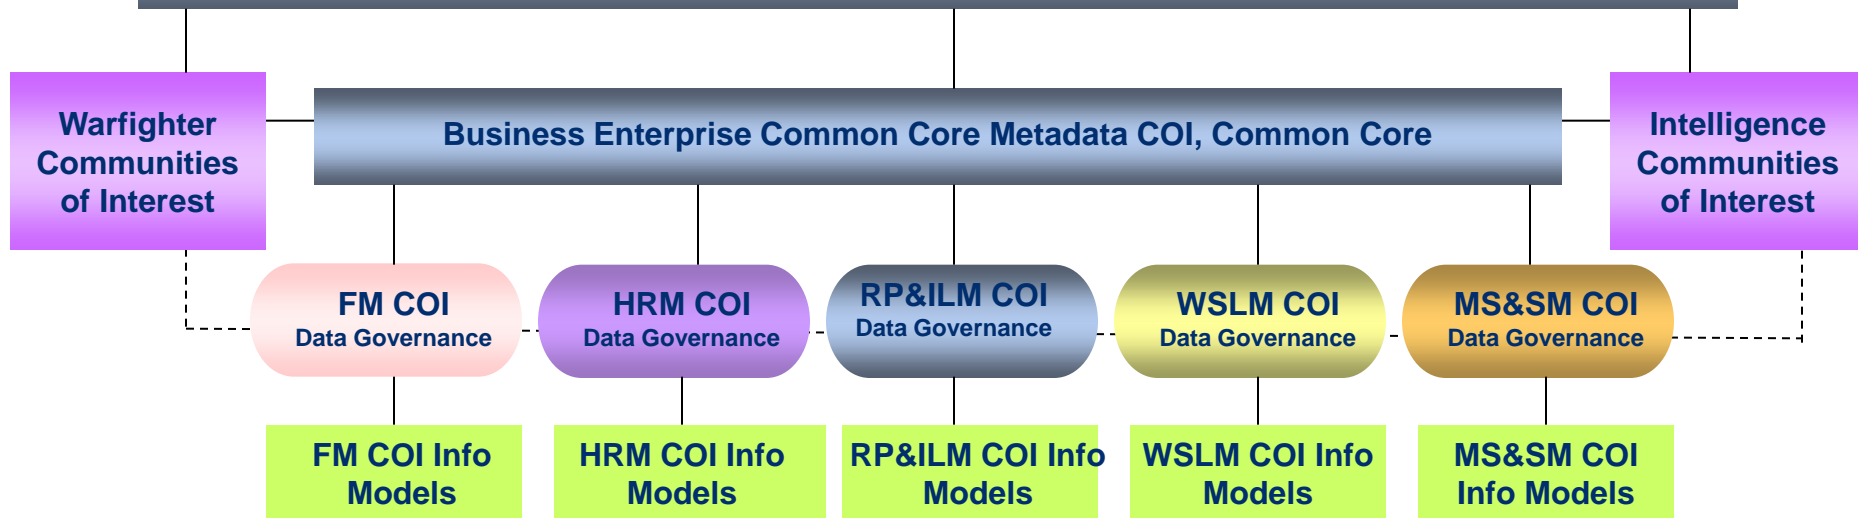

Adjudicating the Business Enterprise Common Vocabulary

The BECCM COI provides governance for the DoD's end-to-end business process enterprise standards

- In the event consensus on enterprise standards cannot be reached at the COI level, the COI will adjudicate across functional areas
